

Health Accounts Production Tool Technical Specificities

Installing HAPT software

Hardware Requirements

RAM memory: 4GB or more

HDD: 5GB Free space

CPU: 2.7 GHz or higher

Software Requirements

OS: Windows XP SP3/Vista/7/8. Windows 8 requires internet connection on first installation.

Windows 8

First installation on Win 8 requires to be connected to internet. This is because there is a windows feature used by HAPT application that comes as an optional feature in Windows 8, which means that this feature is not pre-installed with Windows 8. The only way to install this feature is to process it while installing HAPT.

The Internet connection will be needed only when first installing HAPT, and only if that feature is not enabled before by other programs or users.

Total storage capacities

The size of on HAPT study will depend on the number of classifications used in the mapping (module 5) and on the complexity of the mapping. On average, studies seem to weight about 300mb for 30000 lines (rows) using 12 classifications.

On one computer, several years of studies can be stored in HAPT.

Importing data

A maximum of 30,000 lines can be imported per file.

Negative numbers and zeros are not imported.

The files need to be filled in from cell A1.
