Function: An irreversible temperature indicator for refrigerators that shows if a product, such as vaccine, has been exposed to temperatures beyond assigned alarm settings described above. As long as the temperature is within the allowed range, the OK sign is shown on the display. If the indicator is exposed to an out-of-range temperature the ALARM sign appears on the display. The device shows the actual temperature in degrees Celsius or Fahrenheit, all alarm violations over the previous 30 days (on a rolling basis), the daily minimum and maximum temperature of the last 30 days, and the time duration of any violation. Useful life is 2 years approx.

Use: This electronic temperature indicator is used to monitor the correct storage temperature of vaccines and other perishable goods.
