**Function:** The FreezeAlert™ is a single alarm electronic temperature indicator providing an irreversible display of temperature exposure relative to the alarm setting of < -0.5 °C for a continuous period of 60 minutes. If the indicator is exposed to conditions exceeding the alarm setting, the display changes from a “√” to an “X”, informing the user of the triggered alarm state. The device contains an integrated push-button switch for field activation and a dynamic “dot” icon which affirms active monitoring.

**Main purpose of the device:** The FreezeAlert™ is designed to monitor vaccines and other freeze-sensitive materials during transit and storage.
