

Corrigenda

The items listed below are corrections that have been made since the paper copy of the report was published. The electronic version of the report (in pdf version) contains all the corrections below.

- A new double-sided (recto verso) page was inserted into the report as a correction for Annex 4A--Recommended policies and strategies for malaria control, 2009.
- Page 17, Table 3.3, bottom row. Population surveyed for "ITN household ownership" was changed from 173 to 192 million and for "ITN use, < 5 years" was changed from 190 to 192 million.
- Page 32, Figure 4.5, figure b, "Malaria inpatient deaths, children < 5 years old". "All-cause deaths" should be changed to "Malaria deaths" in the top legend item. The title and the right-handed axis correctly label the graph as "malaria deaths" from routine health information system.
- Page 169, Annex 2. Removed sentence "Mayotte is one the 108 countries/areas with malarious areas but is not included in the annexes." Mayotte is not a country and is not included in the list of 108 endemic countries; adding Mayotte would result in 109 countries/areas.
