

# **Measurements and Criteria for Standards Harmonization in the Field of EMF Exposure**

Varna, Bulgaria 28 April - 3 May 2001

## **PURPOSE AND SCOPE OF MEETING**

Dr MH Repacholi World Health Organization, Geneva, Switzerland

To review the biological effects from exposure to electromagnetic fields (EMF) in the frequency range 0-300 GHz. These effects will be discussed in relation to possible health consequences from EMF exposure resulting from devices used in Eastern Europe, such as power lines, domestic and industrial electrical appliances, mobile telephones, radars and video display terminals. International and regional scientists will provide an overview of the biological and health effects from exposure to EMF reported in the scientific literature.

One of the major objectives of the meeting is to discuss differences in EMF standards between the countries and, in particular, between Eastern and West European countries, USA and other countries of the world.
