ART indicates antiretroviral therapy; CPT, co-trimoxazole preventive therapy; DST, drug susceptibility testing; EQA, external quality assurance; HIV+, HIV-positive; pls, patients. See Explanatory notes on pages 187 for further details. Some countries provided the number of TB patients found to be HIV-positive, but did not provide the number of TB patients tested. The regional total of TB patients tested is therefore lower than the number of patients actually tested, and cannot be used to calculate a regional estimate of HIV prevalence in TB patients. Data can be downloaded from www.who.int/tb

Not eval. indicates not evaluated (percentage of registered cases for which outcomes were not recorded); success, sum of cured and completed; cases regist'd, the denominator for calculating treatment outcomes. The number of cases registered for treatment in 2005 is used as the denominator for calculating treatment outcomes unless it is less than the sum of outcomes, in which case the sum of outcomes is used. If the number of cases registered is not reported, then the number of cases notified in 2005 is used, or the sum of outcomes if the latter is greater. Data can be downloaded from www.who.int/tb

Notes

Brunei Darussalam

Breakdown by age and sex provided for cases in nationals only.

China, Macao SAR

39 cases treated outside public sector, with site and history of treatment unspecified were reported as “other”, non-DOTS.

Japan

The number of cases registered for treatment is different from the number of cases reported for 2005 due to changes in the jurisdiction of some public health centres. Treatment outcomes are only available for pulmonary TB patients treated under standardized regimens (with isoniazid and rifampicin).

Republic of Korea

There is no mechanism for follow-up of treatment outcomes for patients who transfer from the public sector (DOTS) to the private sector (non-DOTS).
